

Classess.com® Independent Student Homepage

Media Placement Instructions for the Developer

[DEVELOPER NOTE — DO NOT DISPLAY]

Every media requirement is identified using a unique reference number such as **MEDIA 01**.

The same number will be used in the separate Media Production Brief.

When the media team delivers the final file, the developer should place it in the corresponding media slot.

Do not display any text written inside square brackets on the live website.

SECTION 01 — STUDENT HERO

[DEVELOPER NOTE — DO NOT DISPLAY]

This is the first section displayed after the visitor selects **"I am a Student."**

[MEDIA SLOT — MEDIA 01]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place on the right side of the hero content on desktop.

On mobile, place below the hero heading, description, and primary button.

[RECOMMENDED MEDIA FORMAT]

Short looping product-interface animation or product demonstration video.

Preferred implementation:

- WebM or MP4 video
- Autoplay
- Muted
- Looping

- No visible video controls
- Static image fallback

[DEVELOPER ACTION]

Create a responsive media frame for MEDIA 01.

Do not use a standard YouTube-style video player.

The animation should feel like part of the website interface rather than an external video.

[MEDIA CONTENT SUMMARY]

Show a clean student dashboard with:

- Today's learning goal
- Recommended concept
- Recommended practice activity
- Examination readiness
- Continue Learning button

[FALLBACK MEDIA]

Use a static product-interface image if the animation does not load or if the visitor has reduced-motion settings enabled.

[THIRD-PARTY WORK]

May require a motion designer or UI animation specialist if the internal team cannot produce the animation.

SECTION 02 — STUDENT TRANSFORMATION

[DEVELOPER NOTE — DO NOT DISPLAY]

This section explains the transition from unstructured studying to a guided learning journey.

[MEDIA SLOT — MEDIA 02]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place below the introductory paragraph and above the three benefit cards.

[RECOMMENDED MEDIA FORMAT]

Animated learning-journey graphic.

Preferred implementation:

- Lottie animation
- SVG web animation
- Lightweight CSS or JavaScript animation

[DEVELOPER ACTION]

Create a horizontal animated journey on desktop and a vertical journey on mobile.

[MEDIA CONTENT SUMMARY]

Animate the following learning journey:

Understand → Practise → Improve → Prepare → Progress

Each stage should become active one after another.

[INTERACTION]

When a stage becomes active, display a small supporting message:

- Understand — Learn the concept
- Practise — Strengthen understanding
- Improve — Correct learning gaps
- Prepare — Follow a study plan
- Progress — See what has changed

[FALLBACK MEDIA]

Use a static horizontal or vertical journey graphic.

[THIRD-PARTY WORK]

A motion designer may be required to create the Lottie or SVG animation.

The developer can create it internally if comfortable with lightweight web animation.

SECTION 03 — CONCEPT UNDERSTANDING

[MEDIA SLOT — MEDIA 03]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place beside the section copy.

On desktop, use a two-column layout.

On mobile, place below the section introduction.

[RECOMMENDED MEDIA FORMAT]

Interactive product demonstration or short UI animation.

Preferred implementation:

- Product UI animation
- Short looping video
- Interactive card transition
- Screen recording placed inside a device or browser frame

[DEVELOPER ACTION]

Create one media frame that demonstrates how the same concept can be explained in different ways.

[MEDIA CONTENT SUMMARY]

Show a student selecting:

“Explain this another way.”

The media should then transition between:

1. Simple explanation
2. Real-life example
3. Worked or visual example
4. Read-aloud option

[EXAMPLE CONCEPT]

Use one simple academic concept that is understandable across age groups.

Suggested examples:

- Photosynthesis
- Pythagorean theorem
- Supply and demand
- Newton's laws

The final example should be selected based on the available product interface.

[FALLBACK MEDIA]

Use a sequence of three product screenshots displayed inside a carousel.

[THIRD-PARTY WORK]

The internal product team must provide the approved UI screens.

A motion designer may be required to animate the transitions.

A voice artist is not required unless an audio-based demonstration is intentionally added.

SECTION 04 — PURPOSEFUL PRACTICE

[MEDIA SLOT — MEDIA 04]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place after the section introduction and before the three benefit cards.

[RECOMMENDED MEDIA FORMAT]

Interactive practice recommendation card or animated product UI.

Preferred implementation:

- UI animation
- Clickable carousel
- Short product demonstration video

- Animated card transition

[DEVELOPER ACTION]

Create a media frame that demonstrates how practice changes according to the student's performance.

[MEDIA CONTENT SUMMARY]

Start with:

You understand the concept.

Then show:

Now strengthen application.

Recommended activity:

Application Challenge

The media can then briefly display different practice formats:

- Quiz
- Flashcard
- Concept matching
- Reasoning question
- Written response

[INTERACTION]

The developer may allow the visitor to click between different practice formats.

Do not display all formats at the same time.

[FALLBACK MEDIA]

Use a static recommendation card with one practice activity.

[THIRD-PARTY WORK]

May require:

- UI designer
- Motion designer
- Front-end developer for interactive behaviour

The academic team should approve the practice examples before production.

SECTION 05 — LEARNING GAPS AND EXAMINATION PREPARATION

[MEDIA SLOT — MEDIA 05]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place between the learning-gap explanation and the examination-planning content.

[RECOMMENDED MEDIA FORMAT]

Short two-part product animation.

Preferred implementation:

- UI animation
- Screen-recorded product flow
- Short looping demonstration video

[DEVELOPER ACTION]

Create one responsive media frame containing two connected views:

1. Learning-gap insight
2. Personalised study plan

[MEDIA CONTENT SUMMARY — PART 1]

Show an assessment result such as:

Score: 68%

Then reveal more meaningful insights:

- Concept understanding: Strong
- Application: Needs attention
- Two questions left unattempted
- Recommended action: Revise Topic 3
- Next activity: Application Practice

[MEDIA CONTENT SUMMARY — PART 2]

Transition into a simple weekly examination plan:

- Learn
- Practise
- Revise
- Self-test

Show no more than three actions for any one day.

[HIGHLIGHT MESSAGE]

A score tells you what happened. Classess.com® helps you understand what to do next.

[FALLBACK MEDIA]

Use two static interface images:

- Learning-gap report
- Weekly study plan

[THIRD-PARTY WORK]

The internal product team must provide accurate dashboard and study-plan UI.

A motion designer may combine the two views into one smooth demonstration.

SECTION 06 — PROGRESS AND IMPROVEMENT

[MEDIA SLOT — MEDIA 06]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place beside or immediately below the section titled:

“See more than your marks. See how your learning is improving.”

[RECOMMENDED MEDIA FORMAT]

Progress transformation animation.

Preferred implementation:

- Animated progress card
- Before-and-after UI transition
- Dashboard micro-animation
- Short looping video

[DEVELOPER ACTION]

Show progress as a change over time rather than as a large analytics dashboard.

[MEDIA CONTENT SUMMARY]

Display:

Previously

Needed support with application questions

Now

Improving through targeted practice

Next step

Complete one application challenge independently

The media may also show:

- Concepts understood
- Learning gaps corrected
- Practice consistency
- Examination readiness

[INTERACTION]

The animation should move from:

Previous position → Current position → Recommended next action

[FALLBACK MEDIA]

Use a static three-stage progress card.

[THIRD-PARTY WORK]

May require a motion designer.

The product and academic teams should confirm that the progress terminology matches the actual application.

SECTION 07 — INDEPENDENT LEARNING AND AI SUPPORT

[MEDIA SLOT — MEDIA 07]

[MEDIA STATUS]

Required

[MEDIA PLACEMENT]

Place beside the section explaining the AI learning companion.

[RECOMMENDED MEDIA FORMAT]

Conversational UI animation.

Preferred implementation:

- Animated chat interface
- Product screen recording
- Interactive message sequence
- Voice waveform animation, if voice support is demonstrated

[DEVELOPER ACTION]

Create a product-style conversation frame.

Do not use a generic chatbot image.

The interaction should look like an actual Classess.com® or Vidya interface.

[MEDIA CONTENT SUMMARY]

Student asks:

“I understand the formula, but I do not know when to use it.”

Vidya responds with guidance such as:

“Let us look at a situation where the formula applies. What information has been given in the question?”

The interaction should demonstrate that Vidya:

- Guides the student
- Provides a hint
- Asks a thinking question
- Avoids immediately revealing the final answer

[HIGHLIGHT MESSAGE]

AI that helps you think—not avoid thinking.

[FALLBACK MEDIA]

Use a static chat-interface image containing three or four messages.

[THIRD-PARTY WORK]

The internal product team should provide the Vidya interface.

The academic team should approve the dialogue.

A motion designer may animate the messages and voice waveform.

No external AI brand or third-party chatbot interface should appear.

SECTION 08 — FINAL CALL TO ACTION

[MEDIA SLOT — MEDIA 08]

[MEDIA STATUS]

Optional

[MEDIA PLACEMENT]

Use as a subtle background or supporting illustration behind the final call to action.

[RECOMMENDED MEDIA FORMAT]

Lightweight branded visual.

Preferred implementation:

- Static illustration
- Subtle Lottie animation
- Abstract academic journey graphic

[MEDIA CONTENT SUMMARY]

The media may visually connect:

- Learning
- Practice
- Improvement
- Examination preparation
- Progress

Keep the visual simple so that it does not compete with the primary button.

[DEVELOPER ACTION]

Do not add a video player.

Use a lightweight decorative visual only.

[FALLBACK MEDIA]

No fallback required. The section should work without this asset.

[THIRD-PARTY WORK]

Optional illustration or motion-design support may be used.

SECTION 09 — FREQUENTLY ASKED QUESTIONS

[MEDIA SLOT]

No media required.

[DEVELOPER ACTION]

Use an accordion layout.

Display six questions initially.

Display additional questions after the visitor selects:

View More Questions

Do not include images, videos, animations, or decorative product screenshots inside the FAQ section.

General Media Implementation Requirements

[DEVELOPER NOTE — DO NOT DISPLAY]

All media should:

- Be responsive
- Load quickly
- Include a static fallback where applicable
- Work without sound
- Avoid autoplay audio
- Support reduced-motion accessibility settings
- Avoid creating layout shifts during loading
- Use consistent rounded corners and interface framing
- Match the Classess.com® visual system
- Avoid generic stock photographs unless specifically approved

Recommended technical formats:

- WebM for primary web video
- MP4 as video fallback
- WebP or AVIF for static images
- SVG for scalable graphics
- Lottie JSON for lightweight animations

Every delivered media file should use the corresponding reference number in its filename.

Examples:

- `media-01-student-hero.webm`
- `media-01-student-hero-fallback.webp`
- `media-02-learning-journey.json`
- `media-07-vidya-conversation.webm`
